

Ultimo Maintenance Management Lite

How can we execute our maintenance work efficiently while securing the reliability of our equipment, but without jeopardising production? How can we easily plan activities and build up valuable history? How can we show that we comply with important laws and regulations, and with requirements set out for obtaining certifications? These are all examples of important questions that occupy your maintenance service. Ultimo Maintenance Management Lite is an approachable and user-friendly software tool and supports you with these questions and more. For a very competitive price, you can possess a tool that allows you to professionalise your maintenance service with only basic administrative procedures.

ULTIMO CHARACTERISTICS

The Ultimo software helps you streamline your supporting processes and enhance your results. Typical for the Ultimo software is its flexible nature, which allows the standard software to be customised according to your situation and processes. For this purpose, the Ultimo Customisation Tool is used. Since its establishment in 1988, the service has distinguished itself by its involved and reliable nature. By choosing Ultimo, you choose an investment that you will benefit from for many years; the technologically advanced software is continuously developed by our own team of software developers. Moreover, your maintenance costs will remain low by implementing adjustments in the software yourself.

Maintenance Management

WORK ORDER MANAGEMENT

The Work Order Management module contains all the resources necessary to create and complete given work orders. If so desired, employees (production employees, for example) can register a work order via a simple input screen. Then the work planner can collect and prepare the reported jobs. A work order can also be created directly by the work planner or by others who may be carrying out the job. For each work order, the person performing the work, the work instructions and the planned costs can be stated. The system will calculate the planned start and completion times, independent of the priority. Of course, the work planner is able to change this. A descriptive work form can also be printed and the executed activities and actual incurred costs of processed activities can easily be registered. In addition, you are able to easily record the job type (failure, modification, inspection, etc.) and, if applicable, the failure cause and the down-time. The performed activities can be quickly registered after completing a rush job without having to go through the entire work order process; the history is thus added to by following the most basic procedure. Because of adaptable progress statuses in the software, the work order process can be fully adapted to your processes.

PERIODICAL MAINTENANCE

For every object, one or more periodical maintenance models can be created. The periodical maintenance can be generated based on frequency, meter reading or week number. Because of the graphic planner, you can quickly and effectively view the work intensity regarding periodical maintenance. By using colours, you can distinguish between inspections and servicing, and between maintenance and activities that are to be carried out internally or by third parties. You may adjust the planning in a user-friendly manner by using the 'drag & drop' option. Both the number of days per week that the equipment is operational and the day on which the maintenance must be carried out can be set. The activities to be carried out are linked to a periodical maintenance model. It is also an option to use predefined job and inspection plans. The registered details are then automatically transferred to the work assignment. Historical data are easily found for the purpose of, for example, audits and inspections.

SOFTWARE SOLUTIONS

CONTRACT MANAGEMENT

Maintain a grip on your contracts, the corresponding obligations and terms by comprehensively managing your contracts in Ultimo. You can record various relevant data concerning the contract, the supplier, the obligations and the term. You may also create a link to the location of the contract. In addition, you can easily create a connection between a contract and particular object (equipment), and between a contract and a periodical maintenance model. By using various reports, you maintain a grip on the contracts and monitor, for example, the durations and terms of notice.

EQUIPMENT MANAGEMENT

Via the Equipment Management module, various organisational and technical details about equipment and departments can be recorded. In addition, related images, documents and drawings can be linked to a piece of equipment. All other information related to the installation can be directly accessed via tabs (for example: maintenance history, bill of materials and periodical maintenance models). A clear department-equipment structure can be established, which enhances your insight into your assets.

REPORTS

To enhance your insights and monitor if you comply with the objectives, it is important that you view and analyse reports regularly. Ultimo Lite is provided with a set of standard reports with which you have access to operational information and management information at any time. If required, reports can be adapted or added during the implementation, and with the optional report generator you will be able to do this yourself. With the reports you have an insight into, among other things, the progress of activities, the incurred costs, (service) contracts and historical data. Reports can be displayed on the screen, distributed as a PDF file, and made available via Self Service.

MOBILE WORKING WITH ULTIMO GO

Enhance your mobility and perform a large portion of your activities with the Ultimo Go app (available as a standard feature). You are no longer bound to your workplace and free to go wherever you want. Use your smartphone or tablet to report or process activities directly on site. In addition, you can consult relevant information. All of this is available via simple touch controls. Additional information concerning the available functions, the (optional) Ultimo Go+ app and the hardware and software requirements can be requested from us.

OTHER POSSIBILITIES

In addition to its important functionality in terms of work order management, periodical maintenance, contract management and equipment management, Ultimo Maintenance Management Lite offers more:

- + Simple registration of hours and costs
- + Article registration within your warehouse
- + People and master data management
- + Standard notifications to inform you of important events
- + Ultimo Customization Tool
- + E-mail import (optional)
- + Authorisation management (optional) for setting up access authorisations, etc.
- + Self-Service (optional) to directly involve your internal customers with the maintenance process via a user-friendly, accessible and personal service page
- + Various optional possibilities to integrate the software with other business software, including ERP systems, MES systems, OEE systems, financial systems, purchase/logistics systems, MS Office, etc. We can provide you with a complete overview of available information.

SUITABLE FOR EVERY ORGANISATION

Ultimo Maintenance Management Lite is applied in all imaginable sectors; for example, industry, logistics, service, leisure, environment, energy, government and health care. The software is suitable for the (small) technical service, but also as an entry model for a larger technical service.

EXPAND TO ULTIMO MAINTENANCE MANAGEMENT?

In case your functional requirements increase, you can upgrade to the comprehensive Ultimo Maintenance Management system without any investment loss. A separate brochure is available if you require further information about Ultimo Maintenance Management.

RENTING OR BUYING

Depending on your wishes, we offer the possibility to either rent (SaaS) or buy Ultimo. Because the Ultimo software is web-based, your choice does not affect the availability of the functionality and the characteristic flexibility. Contact us for more information.

ADVANTAGES ULTIMO MAINTENANCE MANAGEMENT LITE

- + Increase the efficiency of your maintenance service and implement several savings
- + Improve the possibilities for planning your maintenance activities for a better quality assurance of your assets
- + Show that you comply with important laws and regulations
- + Specially designed for easy operation and the immediate advancement in terms of professional maintenance management. Also very suitable as an entry model
- + Modern, leading software that is continuously developed and adaptable to your specific processes
