

FACTS AND FIGURES

INDUSTRY

Environmental Services

NUMBER OF EMPLOYEES

800 employees (UK)

LOCATIONS

5 locations (UK)

SOLUTIONS

SaaS – Ultimo Maintenance Management, HSE Module, Work Order Management, Work Permits, Lock Out Tag Out, Risk Assessment, Ultimo Go

CHALLENGES

- Regulatory compliance
- Multiple site integration
- Risk Reduction

RESULTS

- 100% paperless multi-site process
- 100% digitized regulatory compliance achieved

THE FACILITY DIVERTS OVER 90% OF THE COUNTY'S RESIDUAL WASTE FROM LANDFILL.

COMBINING EAM & HSE TECHNOLOGY WITHIN THE WASTE MANAGEMENT INDUSTRY

The Gloucestershire Energy from Waste Facility is designed to reduce the amount of residual waste, landfilled in Gloucestershire. Aside from the safety aspect of dealing with residual waste which cannot be recycled or composted, this energy from waste facility produces the equivalent electricity to power 25,000 homes, and contributes to Gloucestershire's overall renewable energy production. Urbaser identified the need for a EAM System that aligned with the Power sectors approach to managing safety assessment of works with work order processes and enable the system to manage / connect with multiple sites. This is the first site to be considered.

'The platform is extremely flexible and the project manager extremely competent at modifying the system to suit our needs.'

ANDREW EVANS, GLOUCESTERSHIRE MAINTENANCE MANAGER

'I have found Ultimo software very flexible to work with even down to customising the system to meet our exact requirements.'

Easy to use

Prior to this product, we had no system, as it was a new build EfW site, with this in mind and setting up the whole site, Urbaser wanted an EAM system that was easy to use and also incorporated the Permit to Work system and Risk Assessments.

Urbaser identified Ultimo as the best product for Permit to work and Risk Assessment and its capability to up-scale as they grew

Covering all assets

Ultimo covers all assets including the building structure and 120 spaces within the facility site. The Asset structure managed entirely within Ultimo covers:
2500 assets all linked to a vendor with serial numbers and linked to a process function
9000 process functions in a structure of 280 equipment types
800 spare parts – articles, all linked to equipment or process functions

'We were able to have one system to manage our work orders and permits.'
