

## FACTS AND FIGURES

### SECTOR

Food

### TURNOVER

150 million (2018)

### NUMBER OF EMPLOYEES

700+

### LOCATIONS

11 (in the Netherlands and Belgium)

### SOLUTIONS

SaaS – Ultimo Maintenance Management Lite

### CHALLENGES

- Gaining 100% control of the full maintenance process, step-by-step.
- To unify separate working methods per production area, and drive integrated processes.
- Achieving cost savings through better insight of processes.

### RESULTS

- Developing and implementing one clear and efficient working method.
- Recording and analysing as much data as possible.
- Converting data into efficiency and cost savings.

ULTIMO HELPS WITH SAVING TIME AND COSTS.

INSIGHT IS NECESSARY FOR BETTER RESULTS.

Group of Butchers make the most delicious and high-quality products by creating unique concepts involving meat. 'Let's make something special' is their slogan that they honour every day. This involves over 350 people on seven locations in the Netherlands and Belgium. For the production process they use up-to-date machinery. Until recently, they had no detailed insight into the status of their machinery. Since they started using Ultimo, they have been taking steps to improve every year, their technical reliability has improved and they have been able to achieve cost savings.

'We're saving on maintenance and time, and we're improving every year. Ultimo helps us with this.'

FRANK CLAASSEN, TECHNICAL MANAGER

'I had a good feeling about the setup of Ultimo, it's a user-friendly system that is visually very clear and organised.'

#### Analysing data provides more efficiency

Group of Butchers was lacking a clear way of working for every production location, which hampered their ability to analyse what was going on, it caused their up-to-date machinery to not be used to its full potential. The next step in efficiency and maintenance could not be taken without Ultimo. The meat producer is now using a SaaS subscription so the initial investment was quite low and Ultimo is available anywhere and at any time as it is in the Cloud. All the work of the technical service, like all the data of all assets, is recorded in Ultimo. Through an advanced dashboard, Group of Butchers can now use these data, linked to the data for OEE (Overall Equipment Effectiveness), to make thorough analyses and to pin-point improvements in terms of maintenance.

#### 100% control in a short amount of time

Even in day-to-day practice, the data in Ultimo ensures an efficient working method. With information about assets that is available quickly and clearly for the staff plus a history and manuals that can be viewed and consulted quickly. Uniformity for all production locations. Before Ultimo, every location had its own way of registering data. Now their plans is to keep expanding the number of people and departments that work with Ultimo so that Group of Butchers is and stays 100% in control of the technical reliability and the full maintenance process.

'Ultimo has connected the entire organisation.'
